Intelligent Design Creationism:  Why it is standard, anti-evolutionist special creationism

1. Misleading definitions of evolution: the straw man

2. Distortion of commonplace scientific concepts: sowing doubt

3. Incorrect, incomplete presentation of scientific evidence: Undermining legitimate science to ridicule it

4. Direct (but disguised) origin of ID claims in discredited, frankly religious arguments of “scientific creationism”

5. Illogical conclusion that alleged “evidence against evolution” (99% of ID arguments) is evidence FOR “intelligent design”
