"Understanding the intelligent design creationist movement"

[3]

The Center for Inquiry released a new position paper, "Understanding the intelligent design creationist movement: Its true nature and goals," on May 29, 2007. Written by Barbara Forrest, the [paper](#) [4] (PDF) examines "the ID movement's organization, its historical and legal background, its strategy and aims, and its public policy implications," arguing that, "In promoting 'intelligent design theory' -- a term that is essentially code for the religious belief in a supernatural creator -- as a purported scientific alternative to evolutionary theory, the ID movement continues the decades-long attempt by creationists either to minimize the teaching of evolution or to gain equal time for yet another form of creationism in American public schools. Accordingly, the ID creationist movement threatens both the education of the nation's children and the constitutional separation of church and state, which protects the religious freedom of every American."

Barbara Forrest is a professor of philosophy at Southeastern Louisiana University and a member of NCSE's board of directors; with Paul R. Gross she wrote [Creationism's Trojan Horse: The Wedge of Intelligent Design](#) [5] (Oxford University Press, 2004), the definitive exposé of the "intelligent design" movement's so-called Wedge strategy, recently published in paperback with a new chapter about *Kitzmiller v. Dover*. Forrest testified for the plaintiffs in the *Kitzmiller* trial, and Judge Jones wrote in his ruling, "Dr. Barbara Forrest ... has thoroughly and exhaustively chronicled the history of ID in her book and other writings for her testimony in this case. Her testimony, and the exhibits ... admitted with it, provide a wealth of statements by ID leaders that reveal ID's religious, philosophical, and cultural content." The Center for Inquiry seeks "to promote and defend reason, science, and freedom of inquiry in all areas of human endeavor."
