[A call for a presidential debate on science and technology](#) [3]

A non-partisan coalition is calling for a presidential debate on science and technology. "Given the many urgent scientific and technological challenges facing America and the rest of the world, the increasing need for accurate scientific information in political decision making, and the vital role scientific innovation plays in spurring economic growth and competitiveness," the coalition [writes](#) [4], "we call for a public debate in which the U.S. presidential candidates share their views on the issues of the environment, health and medicine, and science and technology policy."

In a December 26, 2007, [press release](#) [5], John Rennie, editor-in-chief of *Scientific American* and a member of the coalition's steering committee, explained, "Matters of science and technology underpin every important issue affecting the future of the United States. It's crucial for the nation's welfare that our next president be someone with an understanding of vital science, a willingness to listen to scientific counsel, and a capacity for solid, critical thinking. A debate would be the ideal opportunity for America and the candidates to explore our national priorities on these issues."

The coalition is chaired by Representatives Vern Ehlers and Rush Holt, scientists themselves, who remarked in a joint statement, "We believe a debate on these issues would be the ideal opportunity for America and the candidates to explore our national priorities for the twenty-first century, and we hope candidates will wish to be involved in such a discussion." Among the others calling for the debate are fourteen Nobel laureates, the editors-in-chief of *Nature* and *Science*, and NCSE's executive director Eugenie C. Scott. The coalition is accepting new supporters on its [website](#) [4].
