[Eugenie C. Scott interviewed in Science News](#) [3]

NCSE's executive director Eugenie C. Scott was [interviewed](#) [4] by *Science News* about the need for scientists to watch their language when talking about evolution and the nature of science. "What your audience hears is more important than what you say," she observed, recommending, for example, that scientists describe themselves as "accepting" rather than as "believing in" evolution.

Answering the question "What should scientists and people who care about science do?" Scott replied, "I'm calling on scientists to be citizens. American education is decentralized. Which means it's politicized. To make a change ... you have to be a citizen who pays attention to local elections and votes [for] the right people. You can't just sit back and expect that the magnificence of science will reveal itself and everybody will ... accept the science."
