[A preview of Written in Stone](#) [3]

NCSE is pleased to offer a free [preview](#) [4] (PDF) of Brian Switek's *Written in Stone: Evolution, the Fossil Record, and Our Place in Nature* [5] (Bellevue Literary Press, 2010). The excerpt discusses the evidence for the dinosaurian ancestry of birds: "There is scarcely anything about a pigeon perched on a statue or a chicken you eat for dinner that did not first appear in dinosaurs, long before *Confuciusornis* flew in great flocks over what is now China," Switek writes. "The majority of their relatives sunk into extinction sixty-five million years ago, but they are perhaps the most successful dinosaurs ever to have evolved. If you want to see living dinosaurs, you don't have to trek to a steaming jungle or isolated plateau. All you have to do is put up a bird feeder and look out the window." Niles Eldredge writes, "Elegantly and engagingly crafted, Switek's narrative interweaves stories and characters not often encountered in books on paleontology — at once a unique, informative and entertaining read."
